

Renewable Energy Outlook

Evidence sample / page 1

Executive summary

Solar generation increased by 24 percent during 2025, driven by lower module prices and faster permitting.

Renewable Energy Outlook

Evidence sample / page 2

Regional findings

Western sites produced 18 percent more energy than forecast. Grid interconnection remains the largest delivery risk.

Metric	2024	2025
Solar output	8.1 TWh	10.0 TWh
Storage capacity	2.4 GWh	3.7 GWh
